

V9.0: Three Bounds Screaming

THE THREE PINNED PARAMETERS

Two Basins: Same Design Family, Different Tightness

What This Means

- Both basins found the SAME design family: n=8 octagon, $\lambda=0.40$ blades, 81 mm beams.
- Basin A found the exact optimum (30 islands, independent, unanimous).
- Basin B got close but settled 1–2 kg heavier with slightly wider parameter spreads.
- The difference between basins is NOT strategy – it's precision. Basin B islands just didn't fine-tune the last 1–2 kg.
