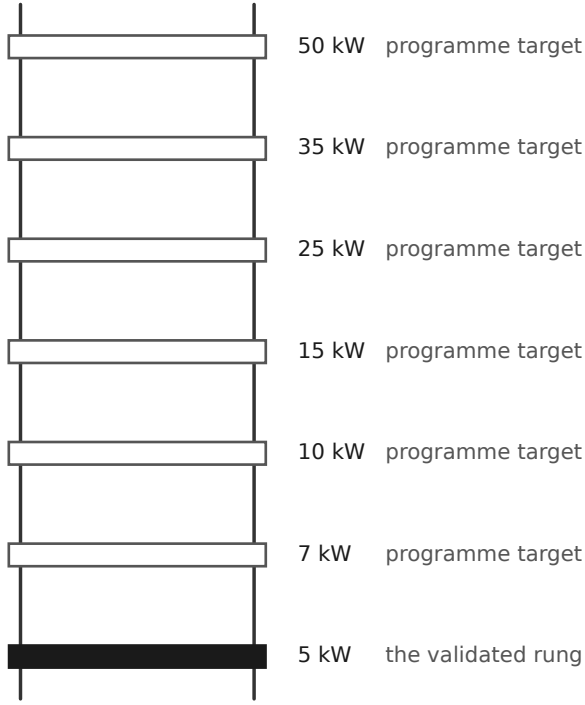
# The scaling ladder

the rungs above the validated machine are programme targets, not results



filled — the validated rung: landed

the campaign dataset and the register back it

open — programme targets: forward-looking

the plain label: programme target — no repo artifact

*Rungs sit at equal spacing. The plate is not a value scale.*

*No screen value prints.*

source: the value-claims ledger, section 4 (v1 seed commit aa76367) · the code set: scripts/compute_seeds.jl, const RUNGS
no register row binds this plate · every drawn element resolves to the value-claims ledger · script commit 4ebc385
