

5 kW campaigns — evaluation outcomes by TRPT length (v13)

ok clearance_reject reject reject_twist

All 2,784 designs the three search campaigns evaluated (each campaign ran one chain length: 18, 21.2 or 25 m), tallied by outcome: green passed, amber failed the 1.5 m ground-clearance gate, red ran but failed the scoring gates (sustained power below the floor, structure below the hard FoS gate, or above-Betz power — a divergence flag), dark red rejected on chain twist. 1,921 passed; clearance is the dominant rejection (226/279/151) and twist rejects triple at 25 m — the search scrapes the 1.5 m ground gate, the same safety constraint a real rig respects.
